

An established process management system today forms an essential part of the success and further development of any modern company. We strive to pass on our extensive knowledge of process management and organizational development through our training. Thanks to the right combination of theoretical principles with practical examples and simulations, you will be able to implement this newly-acquired knowledge right away!

Goal of the training

After the training has been completed, participants will be able to establish and design processes, analyze them to uncover optimization potential, and implement improvements for them.

Target groups of the training include:

- Employees who participate in process improvement activities or implementation projects
- Employees who are interested in learning more about the underlying methods and systematics of efficient Process Management
- Department heads and divisional directors who aim to optimize their processes (with moderate complexity)

Content

- Introduction to Process Management
- Planning: Process definition (Understand your process!)
- Measuring: Current state (How good is your process?)
- Checking: Process analysis (Why is it not running smoothly?)
- Acting: Process optimization (What must be done?)

Your benefits

Through conducting industry-focused exercises, participants learn how to apply various tools in different project situations and, transfer them to their day-to-day business. Our trainers are Process Management specialists with many years of project experience in various sectors. We can thereby ensure a high learning curve, utilizing several exercises, project examples and case studies. Our trainers are also available for project coaching.
