

RPA (Robotic Process Automation) Analysis of the automatability of processes

As a specialized process consulting firm, procise is the partner of the RPA provider, ALMATO, for the automatization of business processes.

Initial situation:

You want to automate selected business processes and require an assessment on whether they are suitable for this.

Objective:

Evaluate the RPA suitability of a process by performing a process analysis. Single out weak points and identify optimization potential before automation.

Our service:

We will carry out a process analysis in 3 phases:

1. Review of relevant documents and records (2 days)
2. Examination of the current process on site (2 days)
3. Documentation and presentation of the results (2 days)

The analysis will be carried out by an experienced process expert at Black Belt level. The scope of the analysis will be defined from the beginning so that it can be carried out within six consulting days.

Your advantages:

- Independent assessment regarding RPA suitability and its benefits
- Identification of optimization potential
- Evaluation of risks before automation
- Process transparency with specific recommendations

Price:

EUR 9,850 plus statutory VAT for Geny
